

Add server cabinet security and protect your assets.

HES KS100-640H Server Cabinet Lock with Aperio® Hub

The KS100-640H server cabinet lock with Aperio technology brings an additional layer of protection to server cabinets with real-time access control using existing ID badges. The easy-to-install lock and hub integrates easily with existing access control systems and provides a valuable audit trail for incident prevention and reporting.

The KS100-640H extends the reach of access control systems to specifically protect data center assets (and server racks) from accidental or malicious intrusion, mitigating costs and risk and ultimately eliminating down time.

The KS100 is available either as a pre-configured lock and hub kit or as part of a larger integrated access control deployment.
