

Look, No Wire!

For more information, visit www.securitron.com.

The Securitron **R100 surface mounted wireless reader** is an access control credential reader that can be installed at significant savings compared to wired readers. Mounting the R100 takes less than 5 minutes using the included adhesive and

can mount directly on cinderblock, stone or glass walls. Mounting screws are included to mount on wood, stucco or other materials.

Savings can reach into the thousands!

By shortening the installation time and running wire only to the foyer drop ceiling rather than through the perimeter wall, the R100 offers considerable savings to retro-fit and new construction access control entryways.

The R100 may save you over \$2000!
